BCH 6107: Biophysical Techniques in Proteomics and Protein Science

Research Paper Assignment

Due: Beginning of Class, Monday, February 12, 2007

Please write a 1-2 page paper, double spaced, about how you could apply the protein science/proteomics techniques that you have learned to your current research aims.

This paper should cover:

1) A scientific question that you are trying to answer by using these techniques

2) What technique(s) you plan to use

3) Why and How you feel these techniques will allow you to answer your question

Note: If you are already using one or more of these techniques in your research, please choose a different approach to describe. If you must, you may choose a different question to ask while using a technique that you already use.
